Product Description

GB 1350 Oxidized Aluminium Wire Used For Cable 150-400MPa

1. Compared with other commonly used metals, aluminum wire and other aluminum products have lower density and light weight. The density is only 2.70g/cm³, which is 1/3 of copper or iron.
2. Aluminum wire and other aluminum products are processed with hot and cold skills in the production process, which has strong corrosion resistance.
3. aluminum wire and other aluminum products have excellent extension function, can manufacture light alloy with many metal elements, excellent material.
4. Compared with other metal materials, aluminum type has strong plasticity, good productivity, and excellent advantages for production and manufacturing.
5. aluminum wire and other aluminum products materials have excellent forging function, can be processed into different shapes of aluminum wire and other aluminum products materials.
6. Excellent surface treatment function, beautiful appearance color.
7. chemical function is stable, non-magnetic, can be recycled repeatedly, is a kind of benign recyclable metal materials.
8. The elasticity coefficient is small, and the collision does not spark, so the car skills perform very well.
9. excellent thermal and conductive function, excellent performance in short distance transmission.
10. Compared with other metal materials, aluminum wire and other aluminum products have no metal pollution, no toxicity, and no volatile metal surface oxidation layer.
