## Product Description

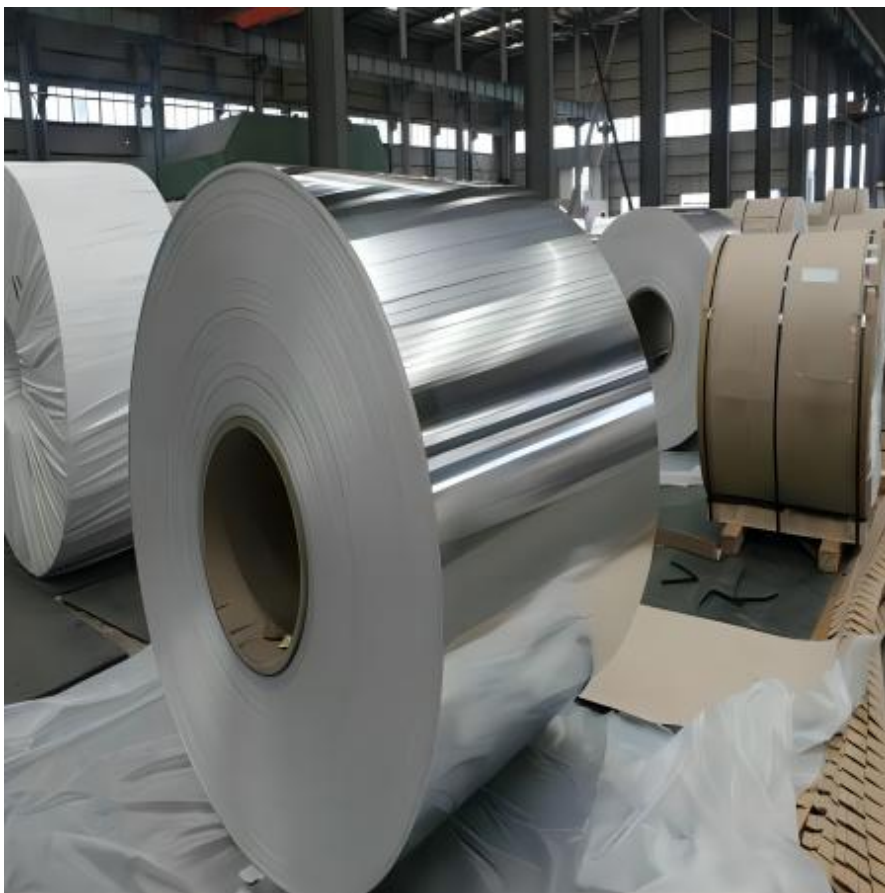

### ASTM 6006 T3-T8 Aluminium Alloy Coil 1000mm For Multiple Uses

The main alloying elements of alloy 6006 are magnesium and silicon, and form Mg<sub>2</sub>Si phase. If it contains a certain amount of manganese and chromium, it can neutralize the bad effect of iron; Sometimes a small amount of copper or zinc is added to improve the strength of the alloy without significantly reducing its corrosion resistance; There is a small amount of copper in the conductive material to offset the effect of titanium and iron on the conductivity; Zirconium or titanium can refine grain and control recrystallization structure; For machinability, lead and bismuth can be added. Mg<sub>2</sub>Si is solidly dissolved in aluminum, and the alloy has the function of artificial aging hardening.

Brand:	LIANZHONG
Model:	6006
Product Name:	ASTM 6006 T3-T8 Aluminium Alloy Coil 2000mm For Multiple Uses
Material:	Aluminum 6006
Width:	0.2-2m or as required
Feature:	Excellent Corrosion Resistance, Highly Reflective, Excellent Conductivity
MOQ:	5 tons
Alloy Or Not:	Alloy
