## Product Description

### ASTM 6165 Mill Finish Aluminium Flat Bar For Industry 4m

flat bar has good strength, and the surface is relatively smooth compared to other steels. In addition, the thickness of hot rolled flat steel is very close, which determines that it is very suitable for welding. It is worth mentioning that the bearing weight of flat steel is larger. And components, escalators, fences and other items in the production process, welding is an essential processing technology. The steel must also be smooth enough to support a certain amount of heavy load. And some characteristics of flat steel exactly meet the requirements. This makes it a raw material for fabricating components, escalators and fences.
