### **Product Description**

#### ASTM 5005 Aluminium Checkered Plate For Construction 200-2600mm Width

Aluminum plate refers to the aluminum material with a thickness of more than 0.2mm to less than 500mm, a width of more than 200mm and a length of less than 16m, which is called aluminum plate or aluminum sheet. Aluminum plate refers to the rectangular plate rolled from aluminum ingot, which is divided into pure aluminum plate, alloy aluminum plate, thin aluminum plate, medium thickness aluminum plate and pattern aluminum plate. Aluminum plates are generally divided into the following two types: 1. According to alloy composition: High purity aluminum plate(rolled from high purity aluminum with content above 99.9) Pure aluminum plate (the composition is basically rolled from pure aluminum) Alloy aluminum plate (composed of aluminum and auxiliary alloys, usually aluminum copper, aluminum manganese, aluminum silicon, aluminum magnesium, etc.) Composite aluminum plate or welding plate (special purpose aluminum plate material is obtained by means of multiple material compounding) Aluminum clad aluminum plate (the outer edge of aluminum plate is coated with thinaluminum plate for special purposes) 2. Divided by thickness: (unit: mm) Sheet 0.15-2.0 Conventional board 2.0-6.0 Middle plate 6.0-25.0 Thick plate 25-200.
