Product Description

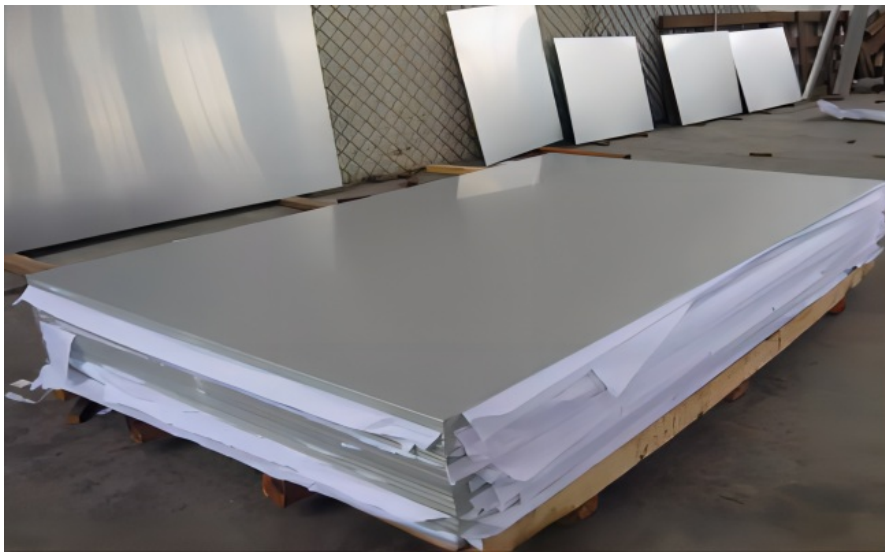

High Strength Colour Coated 2024 Aluminium Sheet Used For Aircraft Structure

The 2024 Alloy brand was registered by the United States in 1954. At temperatures above 125°C, the strength of the 2024 alloy is higher than that of the 7075 alloy. The formability is good in hot state, annealing state and new quenching state, and the heat treatment strengthening effect is remarkable, but the heat treatment process is strict. It can be welded or riveted by special processes. Widely used in aircraft structure, rivets, truck hub, propeller components and other structural parts.
