Product Description

1100 High Corrosion Resistance Aluminium Sheet Used For Heat Exchanger Assembly

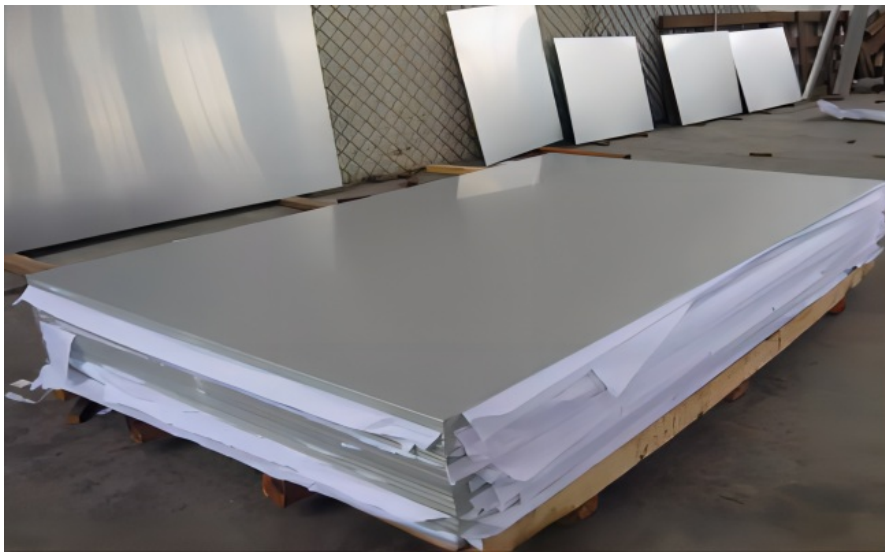

1100 is industrial pure aluminum, aluminum content (mass fraction) is 99.00%, can not be strengthened by heat treatment. With high corrosion resistance, electrical conductivity and thermal conductivity, its density is small, good plasticity, through pressure processing can produce all kinds of aluminum, 1100 is usually used to require good forming processing performance, high corrosion resistance, do not need high strength, For example, food and chemical handling and storage equipment, sheet metal products, hollow hardware processed by drawing cargo spinning, welding combination keys, reflectors, nameplates, etc.
