Product Description

A3003 1000mm-2000mm Width Smooth Surface Used To Make Kitchenware

3003 aluminum coil is a metal product for flying shear by casting and rolling machine after calendering and drawing bending Angle processing. Widely used in electronics, packaging, construction, machinery and other industries. 3003 is AL-Mn alloy, which is the most widely used antirust aluminum. The strength of this alloy is not high (slightly higher than that of industrial pure aluminum), and it cannot be strengthened by heat treatment. Therefore, cold working method is adopted to improve its mechanical properties: In the annealing state has a high plasticity, in the semi-cold hardening plasticity is good, cold hardening plasticity is low, good corrosion resistance, good weldability, bad machinability.
