## Product Description

### JIS 1100 Aluminium Sheet 20~2200mm Width Coated Surface For Food And Chemical Equipment

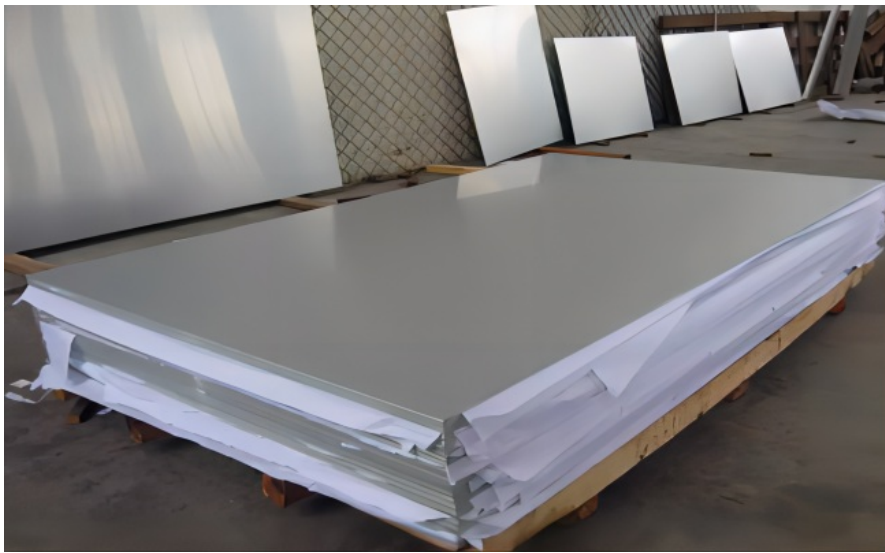

1100 is industrial pure aluminum, aluminum content (mass fraction) is 99.00%, can not be strengthened by heat treatment. With high corrosion resistance, electrical conductivity and thermal conductivity, its density is small, good plasticity, through pressure processing can produce all kinds of aluminum, but low strength. Other process properties are basically the same as 1050A. 1100 is usually used for requirements of good forming processing performance, high corrosion resistance, do not need high strength, such as food and chemical handling and storage equipment, sheet metal products, with drawing goods spinning processing hollow hardware, welding combination keys, reflector, nameplate, etc.
