## Product Description

### Product Description:

3003 alloy is the Al-Mn series aluminum alloy, which is the most widely used of all anti-corrosion aluminum. It is moderately strong (the strength is higher than pure aluminum). Although it can not be treated, it can be easily welded. It is usually increased in strength by the way of cold working. It is with high plasticity at the annealed temper, and it is with good anti-corrosion at the cold working. It is one of the alloys which have great machinability.
