Product Description

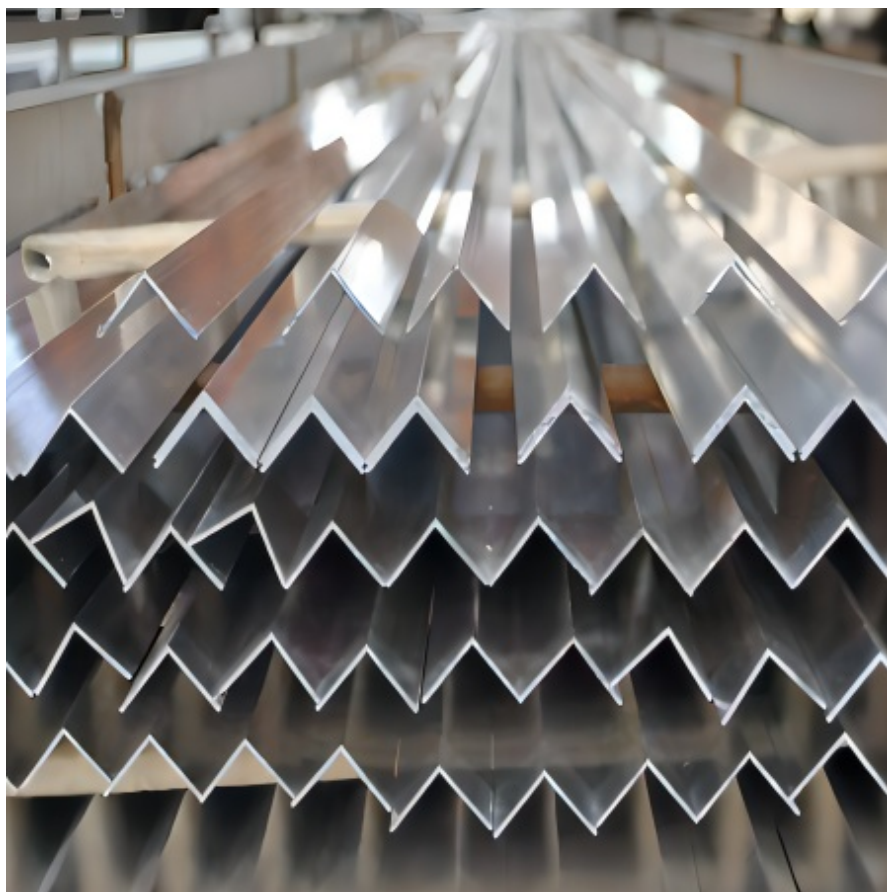

ASTM 2mm 6061 Thick Aluminum Angle Equal Side Customized Size 40 X 40 For Extrusion Brushed Profile

Product Description

Aluminum Angle is a shape which has two "wings" (aka "legs") to form a 90 degree angle or "L" shape. The product is typically used in structural applications, general fabrication, and as trim. The "L" shape of the item provides an inherent strength and rigidity that is very useful in building structural systems. Its range of applications is wide and can include frame work, bracing, support structure, etc, and virtually anywhere a structure's rigidity needs to be improved. We offer Aluminum Angle in "equal leg" (legs that are the same length) or "unequal leg" (legs that are different lengths). Aluminum is a versatile metal that is lightweight, corrosion resistant and is relatively easy to weld, cut, machine and conducts both heat and electricity
