Product Description

3003 6061 Aluminium Rod Color Coated for Heat Transfer System 500mm Diameter

Product Description

Aluminum rod is a kind of aluminum product. The casting process of aluminum rod includes melting, purification, impurity removal, gas removal, slag removal and casting process. According to the metal elements contained in aluminum rods, they can be roughly divided into eight categories. Aluminum is a light metal, and its compounds are extremely widely distributed in nature. The resources of aluminum in the earth's crust are about 40 to 50 billion tons, ranking third only to oxygen and silicon. It is a large category of metal in metal varieties. Aluminum has special chemical and physical characteristics. It is not only light in weight and strong in texture, but also has good ductility, electrical conductivity, thermal conductivity, heat resistance and nuclear radiation resistance. It is an important basic raw material for national economic development.
