Product Description

1050 H12 H14 Anodized Round Square Aluminium Pipe Customize Length For Anti-Rust

1050 pure aluminum is a representative model of 1000 series industrial pure aluminum, with an aluminum content of not less than 99.5%. This material has high plasticity, excellent electrical and thermal conductivity, and corrosion resistance, but its strength is low and cannot be strengthened by heat treatment. Therefore, it is widely used in scenarios such as electronic components, chemical containers, and heat dissipation devices that require high formability but low strength.
