Anodized 5005 Thin Flat Aluminum Strips High Elongation 4mm Thickness For Interior Decoration

Product Introduction

5005 alloy: belongs to the Al Mg alloy series, with magnesium (Mg) as its main alloying element. It cannot be strengthened by heat treatment, but its strength is better than that of 1-series pure aluminum, and it has excellent corrosion resistance and processability. The most crucial thing is that its alloy composition is very pure, without impurities such as copper that interfere with the anodizing effect, making it an ideal substrate for anodizing.
